

Innova Plus NCF

Engineered for Recyclability.
Designed for Performance.

As sustainability takes on greater importance, converters are looking for an ink systems that support package recyclability without sacrificing performance. To meet this need, we developed Innova Plus NCF—a high-performance flexographic ink system formulated without nitrocellulose. Optimized for adhesive lamination and mono-material packaging, it helps reduce the risk of recycling contamination while delivering excellent print quality and strong lamination performance.

Product Features

Innova Plus NCF delivers reliable performance across a range of flexible packaging applications.

- Optimized for adhesive lamination on all plastics
- Compatible with solvent-based, water-based, and solvent-less adhesive systems
- Excellent adhesion and bond strength
- Superior color strength and clean printing
- Low solvent retention and excellent block resistance
- Heat and smear resistance for demanding conversion conditions

Product Benefits

Supports recyclability and compliance to meet evolving packaging demands.

- Supports mono-material packaging and circular economy goals
- Reduces risk of discoloration or contamination in post-consumer resin
- Eliminates NC-related thermal degradation during recycling
- Performs reliably on high-speed flexographic presses
- Enables compliance with EPR and EU PPWR requirements
